

The benefits of VoIP

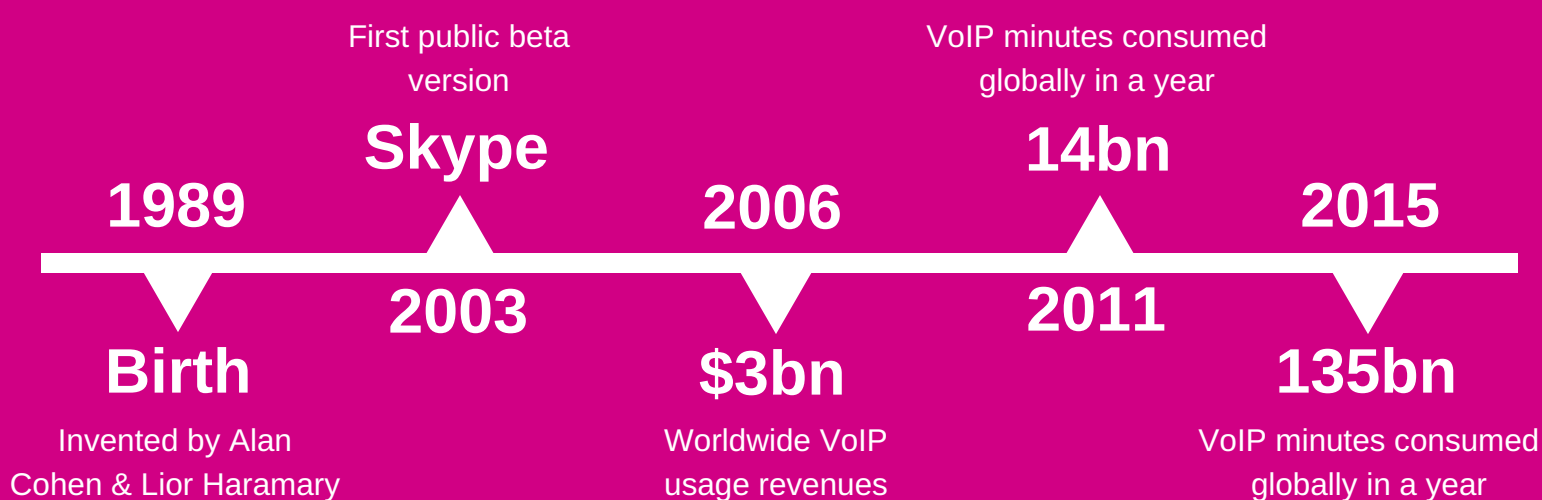

with Hosted Telephony

How it works?

VoIP is an acronym for Voice over Internet Protocol, a method of routing calls via the Internet by converting the voice signal from an ordinary telephone into a digital signal.

The Growth of VoIP

EXPLORE THE BENEFITS

SAVE MONEY

Cheaper call charges, no on-site hardware to purchase, no maintenance fees, no expensive engineer visits and free on-net calls are just a few cost-saving advantages of VoIP.

FLEXIBILITY

By enabling Unified Communications, the features of VoIP allow greater flexibility with access to remote working solutions from anywhere in the world.

HIGHER PRODUCTIVITY

The features of a VoIP phone system also adds real value in terms of productivity, allowing staff to communicate work faster and enabling businesses to provide better Customer Service.

PEACE OF MIND

VoIP solutions allow you to be in control of your telephone systems. By providing full business continuity and disaster recovery solutions, VoIP solutions help businesses remain online 24/7x365.
